TC74VHC4051AF/AFT/AFK

 8-Channel Analog Multiplexer/Demultiplexer

TC74VHC4052AF/AFT/AFK

 Dual 4-Channel Analog Multiplexer/Demultiplexer

TC74V4053AF/AFT/AFK

 Triple 2-Channel Analog Multiplexer/Demultiplexer

   The TC74VHC4051A/4052A/4053A are high-speed, low-voltage drive analog multiplexer/demultiplexers using silicon gate CMOS technology. In 3 V and 5 V systems these can achieve high-speed operation with the low power dissipation that is a feature of CMOS.

   The TC74VHC4051A/4052A/4053A offer analog/digital signal selection as well as mixed signals. The 4051A has an 8-channel configuration, the 4052A has an 4-channel × 2 configuration, and the 4053A has a 2-channel × 3 configuration.

   The switches for each channel are turned ON by the control pin digital signals.

   All control inputs are equipped with a newly developed input protection circuit that avoids the need for a diode on the plus side (forward side from the input to the V_{CC}). As a result, for example, 5.5 V signals can be permitted on the inputs even when the power supply voltage to the circuits is off. As a result of this input power protection, the TC74VHC4051A/4052A/4053A can be used in a variety of applications, including in the system which has two power supplies, and in battery backup circuits.

Features

- Low ON resistance: $R_{on} = 45\Omega$ (typ.) ($V_{CC} = 3$ V)

   $R_{on} = 24\Omega$ (typ.) ($V_{CC} = 4.5$ V)

- Low power dissipation: $I_{CC} = 2.0$ µA (max) (Ta = 25°C)

- Input level: $V_{IL} = 0.8$V (max) ($V_{CC} = 3$ V)

   $V_{IH} = 2.0$V (min) ($V_{CC} = 3$ V)

- Power down protection is provided on all control inputs

Absolute Maximum Ratings (Note)

Characteristics	Symbol	Rating	Unit
Power supply voltage	V_{CC}	−0.5~7.0	V
Control input voltage	V_{IN}	−0.5~7.0	V
Switch I/O voltage	$V_{I/O}$	− 0.5~V_{CC} + 0.5	V
Input diode current	I_{IK}	−20	mA
I/O diode current	I_{IOK}	±25	mA
Switch through current	I_T	±25	mA
DC V_{CC} or ground current	I_{CC}	±50	mA
Power dissipation	P_D	180	mW
Storage temperature	T_{stg}	−65~150	°C

Note : Exceeding any of the absolute maximum ratings, even briefly, may lead to deterioration in IC performance or even destruction.

Using continuously under heavy loads (e.g. the application of high temperature/current/voltage and the significant change in temperature, etc.) may cause this product to decrease in the reliability significantly even if the operating conditions (i.e. operating temperature/current/voltage, etc.) are within the absolute maximum ratings and the operating ranges.

Please design the appropriate reliability upon reviewing the Toshiba Semiconductor Reliability Handbook ("Handling Precautions"/"Derating Concept and Methods") and individual reliability data (i.e. reliability test report and estimated failure rate, etc).

Operating Range (Note)

Characteristics	Symbol	Rating	Unit
Power supply voltage	V_{CC}	2~5.5	V
Input voltage	V_{IN}	0~5.5	V
Switch I/O voltage	$V_{I/O}$	0~V_{CC}	V
Operating temperature	T_{opr}	−40~85	°C
Input rise and fall time	dt/dv	0~200 (V_{CC} = 2.5 ± 0.2 V) 0~100 (V_{CC} = 3.3 ± 0.3 V) 0~20 (V_{CC} = 5 ± 0.5 V)	ns/V

Note: The operating ranges must be maintained to ensure the normal operation of the device.
Unused control inputs must be tied to either V_{CC} or GND.
